

Battery Water Level Indicator

A large problem with battery maintenance is to know when to fill batteries with water. Without indication, operators often need to devise watering schedules or carry out periodic inspections to maintain the batteries. With our battery water level indicator, the guess work of when to water is gone. No schedules are needed and less time is wasted. The visual indicator ensures that mistakes are not made by operators.

FEATURES & BENEFITS

- Easy to use and see.

A mechanical float with a red tip indicates battery water level.

- Patented Technology

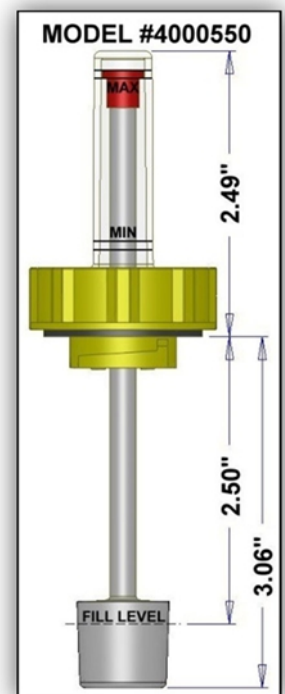

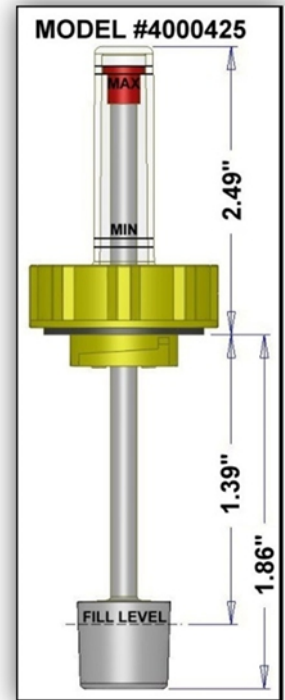

The battery water level indicator also reduces water loss in the battery cell.

- Easy Installation

Bayonet 1/4 turn installation will ensure correct fit into the cell.

- Safe

The flame arrestors prevent any external spark from entering the cell.

A. Less Maintenance.

Eliminates the need to remove the vent caps to check water levels.

B. Protects your battery investment.

The battery water level indicator helps to protect against dry-out, a major failure mode for industrial batteries. It ensures that your batteries get watered only when needed.

C. Inexpensive/Cost Effective.

Over the battery lifetime a water level indicator saves time and labor costs and delivers a rapid return on investment. The level indicator allows watering on a labor saving as needed basis. This is even more important with batteries that require less frequent watering applications.

Currently available in several float lengths to fit most battery water levels.

We can easily make any float length to indicate the water level of your battery.
